New product for AST and LPG bulk storage tanks

Good news. Fueling Technologies has released our new optional “RBU” remote ground level battery unit, as a kit for either new or existing installations.

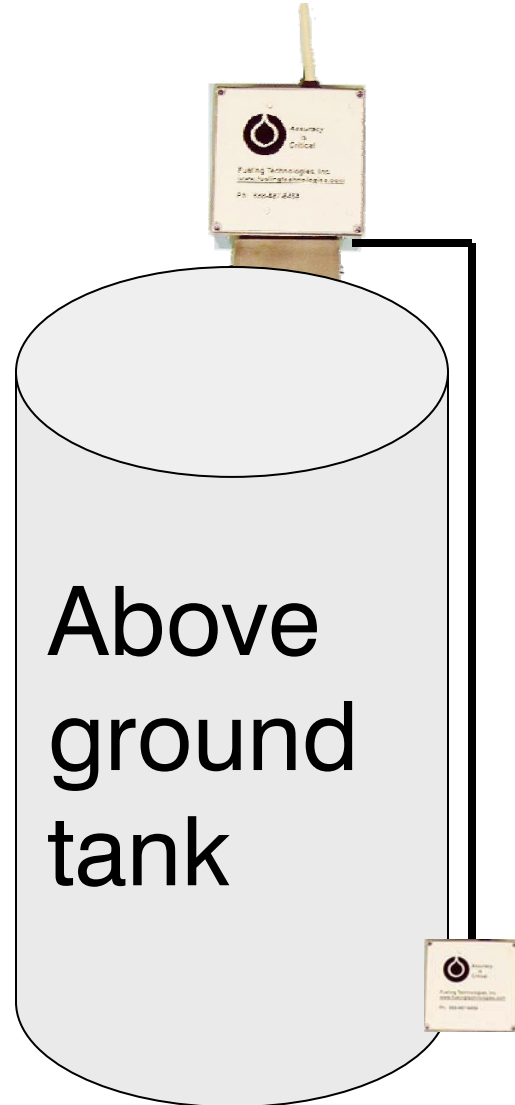

The kit includes the shielded cable used between the Tank Send Unit (TSU) on top of the tank and the ground level RBU.

This new product saves climbing to the top of tanks for battery replacement. The savings are even greater where there are no ladders, and therefore the need for a mechanical lift.

This option is available both for new orders, and for retrofit to existing tanks.

Your business is appreciated.
